Exercise: Tip Calculator

Start a new console application project for this exercise. We're going to calculate a tip calculator.

Perform the following steps in code:

1. Prompt the user for an amount.

2. Prompt the user for a tip percentage as a decimal, ex: 0.35 for 35%.

3. Clear the console screen.

4. Display the output in the format shown below.

```
Tip Calculator
==============
Enter amount: 10.00
Enter tip %: 0.25
```

Once entered, the screen should clear and the following should be displayed:

```
A 25% tip on $10.00 is $2.50
```

Make the tip amount ($2.50) colored in GREEN.

Don't forget to reset the color afterwards!
